Summary

Technical Data Analyst with experience in data architecture, large-scale databases (MySQL, MongoDB), and BI tools like Tableau and Power BI. I build automated analytical pipelines and dashboards that turn complex, messy data into clear, decision-ready insights for business stakeholders.

Skills

Programming & Data: SQL, Python, JavaScript, Git, Data Cleaning, EDA, ETL

Data Tools: MySQL, MongoDB, Excel, MySQL Workbench, Jupyter Notebook, Anaconda

Visualization & BI: Tableau, Power BI, DAX, KPI Dashboards, Star Schema

Development Tools: VS Code, MS Office, GitHub

Professional: Communication, Analytical Thinking, Flexibility, Documentation, Stakeholder Reporting

Experience

Junior Database Administrator

May 2023 – July 2024

Asquare Tech Lab LLP, Rajkot, India

- Optimized database infrastructure and data architecture to ensure seamless, secure, and highly efficient data extraction for downstream analytical reporting.
- Implemented rigorous data validation and quality checks to maintain high data integrity, ensuring a reliable and accurate data foundation for business intelligence.
- Authored and optimized complex SQL queries and indexing strategies, significantly reducing data retrieval latency and enhancing overall reporting and application performance.

Web Developer Intern

Jan 2023 – April 2023

SVIQ Solution LLP, Vadodara, India

- Improved website performance and user experience by analyzing interaction data and applying responsive, data-driven design updates.
- Maintained SQL-backed systems and resolved backend issues to keep data flows stable and support new feature development.
- Collaborated with cross-functional teams to integrate new features, rapidly adapting to new technologies to streamline development workflows and meet project milestones.

Projects

BioThreat Intelligence Platform | Power BI, DAX, Python, GBIF API, IUCN Red List

- Built a 5-page Power BI platform integrating GBIF API occurrence data and IUCN conservation status across 838 species in 233 countries using a star schema with centralized DAX measures.
- Designed a Risk vs Opportunity quadrant matrix that maps species by conservation threat and drug discovery hit rate, turning an ethical trade-off into a clear, data-driven decision tool.
- Exposed pipeline KPIs such as IC50, yield %, QC pass rate, selectivity index, and pipeline ROI for 150 compounds across 4 development stages to prioritize high-value candidates.

DataCo Supply Chain Intelligence Suite | Tableau, SQL, Demand Forecasting

- Developed an end-to-end Supply Chain Intelligence Suite on Tableau Public, visualizing global profitability hotspots and monthly revenue vs. profit trends.
- Implemented "Demand Sensing" and "Profitability Forecast" dashboards to enable proactive supply chain adjustments and strategic decision-making.
- Utilized advanced data blending and calculated fields to harmonize disparate supply chain data points into a cohesive executive-level view.

Gastro-Intestine Segmentation using U-Net | Python, Deep Learning, CNNs

- Built a U-Net-based deep learning pipeline to segment CT/MRI gastro-intestinal images, achieving 85% Dice accuracy on critical anomaly detection.
- Cleaned and structured raw medical image data, applied CNN feature extraction, and evaluated performance with IoU and Dice metrics to deliver precise, clinician-ready diagnostic insights.

Education

Master of Science in Computer Science

Aug 2024 – May 2026

Texas State University, San Marcos, TX | GPA: 3.42/4.0

B.E. in Computer Science and Engineering

July 2019 – June 2023

Gujarat Technological University, Vadodara, India | GPA: 7.72/10
